

Small Vial, Precise Dosage

When you receive your vial, you may notice it isn't filled all the way to the top—this is completely normal! We use the same vial size for different quantities, so the volume inside may appear less than expected.

Rest assured, your vial contains exactly the amount your provider prescribed, measured with precision during compounding. Keep in mind that 5 mL is just one teaspoon—**a small amount can deliver big results.**

* This graphic is for volume reference only. The color of the product and vial may differ depending on the medication.
